IMAGINE. INNOVATE. IMPACT.

PromptWars × KickToTech 2026

STUDENT PARTICIPANT GUIDE

1. Event Details

Date	Wednesday, 28 October 2026
Time	8:00 AM – 7:00 PM (arrival and registration from 8:00 AM)
Venue	Library Building, JSPM University, Wagholi, Pune
Format	In-person, 6-hour Vibe Coding Hackathon
Participation	Individual participation only
Prize pool	₹30,000, plus participation certificates, goodies and internship opportunities
Register at	kicktotech.in/hackathon

Organised by Kick To Tech in collaboration with Hack2skill and Google for Developers (Build with AI).

2. About PromptWars

PromptWars is a hands-on AI building challenge: turn an idea into a working prototype using AI tools. **Vibe Coding** means describing what you want in plain language, letting AI help build it, then testing and improving the result yourself.

On the day you will: choose one track, define your own problem, build one useful working feature (an MVP) with AI, and submit before **5:30 PM**.

How to register: visit kicktotech.in/hackathon, register as an individual, save your confirmation, and test sign-in for your AI tools before 28 October. Bring your student ID and confirmation on the day.

3. Choose One of Six Tracks

Track	Example ideas (you define your own problem)
Education & Student Life	Study planner, notes-to-quiz tool, campus lost-and-found
Agriculture & Rural Solutions	Farm expense tracker, irrigation planner, crop information assistant
Cybersecurity & Digital Safety	Phishing trainer, privacy checklist (use fictional samples only)
Environment & Sustainability	Waste sorting guide, carbon estimator, energy or water tracker
Healthcare & Well-being	Appointment checklist, wellness habit tracker (no diagnosis tools)
Entrepreneurship & Local Business	Shop catalogue, inventory tracker, customer FAQ assistant

4. Bring & Fair Play

What to bring

- Laptop and charger
- Student ID and registration confirmation
- Logged-in coding tools and a backup tool
- Other required devices
- Water bottle and notebook

Fair play & safety

- Build original work; cheating may lead to disqualification
- Use AI openly; be ready to explain your code
- Never paste passwords, API keys or private data into AI tools
- Use fictional or sample data; no attack or data-harvesting tools
- Do not claim features you have not tested

5. Event-Day Schedule

Time	Activity
8:00 – 9:45 AM	Arrival & Registration
10:00 – 11:30 AM	Inauguration Ceremony & Rules Briefing
11:30 – 11:50 AM	Snacks & Refreshments
11:50 AM – 12:15 PM	Seat Settlement & Hackathon Briefing
12:15 – 5:30 PM	**BUILD PHASE & FINAL SUBMISSION (deadline 5:30 PM)**
5:30 – 6:00 PM	Submission Verification
6:00 – 6:30 PM	Evaluation & Demos
6:30 – 7:00 PM	Prize Distribution & Closing Ceremony

Submit early: a project that cannot be opened cannot be judged. Follow live announcements if timings change.

6. Build & Prompting Tips

Suggested plan: understand the problem (first 20 min) → plan a small MVP → get a first version running by 2:00 PM → build the core feature → test and fix by 4:30 PM → write README, take screenshots, submit by 5:30 PM.

Good prompt = role + problem and user + one task + constraints + how to test. Example: *"Act as a product designer and frontend developer. Build a study planner for college students in HTML, CSS and JavaScript, mobile-friendly, with local storage. Give run steps and a test checklist."*

- Plan first, then build one feature at a time and run the app after every change.
- Paste the exact error message when debugging, and keep a working version before big changes.
- Test everything the AI generates and be ready to explain it.

Tools: Google Antigravity (if available), Cursor, Windsurf, Replit, Firebase Studio, GitHub Copilot, HTML/CSS/JS, React, Firebase, Supabase, Figma, Git/GitHub. No paid tool is guaranteed, so check access beforehand and keep a backup.

7. Submission & Judging

What to submit: project name and track, problem and users, solution summary, working demo link or project files, README with run steps and limitations, screenshots or demo video if asked, AI tools used, and an originality declaration. Exact fields will be announced at the briefing.

Criteria	Weight	What judges look for
Functionality & execution	25	Core feature works and demo matches claims
Effective use of AI & prompting	20	Clear iteration; you understand the output
Problem understanding & relevance	15	Clear problem, defined users, fits the track
Innovation & creativity	15	A distinctive approach, not a generic template
User experience & accessibility	10	Clear, readable, easy to use
Testing & responsible design	10	Basic tests, honest limits, data safety
Pitch & demonstration	5	Concise and clear; handles questions

Weights are indicative; the final rubric will be explained before judging. **Demo: 3–4 minutes plus up to 2 minutes of questions.**
