PromptWars × Kick To Tech 2026

IMAGINE. INNOVATE. IMPACT.

6-Hour Vibe Coding Hackathon | Where Ideas Meet AI

28 October 2026
Library Building, JSPM University, Wagholi, Pune

Organised by Kick To Tech with Hack2skill, Google for Developers (Build with AI) and JSPM University

Welcome to Kick To Tech

Building student's talent and infrastructure

Who we are

Kick To Tech is a student-focused tech community. Welcome, builders!

What we do

- Hackathons
- Workshops
- AI & coding events
- Career opportunities

Join the community

Stay connected for future events and opportunities.

Introducing PromptWars

A hands-on AI building challenge: turn an idea into a working prototype using AI tools.

What is Vibe Coding?

Describe what you want in plain language, let AI help build it, then test and improve the result yourself.

On the day: choose one track, define your own problem, build one useful working feature (MVP) and submit before 5:30 PM.

Date	Wednesday, 28 Oct 2026
Time	8:00 AM – 7:00 PM
Venue	Library Building, JSPM University, Pune
Format	In-person, individual only
Prize pool	₹30,000 + certificates, goodies, internships

Choose One of Six Tracks

You define your own problem. Example ideas below are only starting points.

Education & Student Life

Study planner, notes-to-quiz tool, campus lost-and-found

Agriculture & Rural Solutions

Farm expense tracker, irrigation planner, crop information assistant

Cybersecurity & Digital Safety

Phishing trainer, privacy checklist (fictional samples only)

Environment & Sustainability

Waste sorting guide, carbon estimator, energy or water tracker

Healthcare & Well-being

Appointment checklist, wellness habit tracker (no diagnosis tools)

Entrepreneurship & Local Business

Shop catalogue, inventory tracker, customer FAQ assistant

Your Hackathon Journey

Register

kicktotech.in/ hackathon as an individual

Prepare

Test AI tool sign-in; bring ID + confirmation

Pick a track

Define your own problem

Build an MVP

12:15 – 5:30 PM with AI

Submit

Deadline: 5:30 PM

Demo

3–4 min + up to 2 min Q&A

Suggested plan: understand the problem (first 20 min) → plan a small MVP → first version running by 2:00 PM → test and fix by 4:30 PM → README + screenshots → submit by 5:30 PM

Event-Day Schedule – 28 October

8:00 – 9:45 AM	Arrival & Registration
10:00 – 11:30 AM	Inauguration Ceremony & Rules Briefing
11:30 – 11:50 AM	Snacks & Refreshments
11:50 AM – 12:15 PM	Seat Settlement & Hackathon Briefing
12:15 – 5:30 PM	**BUILD PHASE & FINAL SUBMISSION (deadline 5:30 PM)**
5:30 – 6:00 PM	Submission Verification
6:00 – 6:30 PM	Evaluation & Demos
6:30 – 7:00 PM	Prize Distribution & Closing Ceremony

Submit early: a project that cannot be opened cannot be judged. Follow live announcements if timings change.

Rules & Fair Play

Fair play & safety

- Individual participation only
- Build original work; cheating may lead to disqualification
- Use AI openly; be ready to explain your code
- Never paste passwords, API keys or private data into AI tools
- Use fictional or sample data; no attack or data-harvesting tools
- Do not claim features you have not tested

What to bring

- Laptop and charger
- Student ID and registration confirmation
- Logged-in coding tools + a backup tool
- Other required devices, water bottle, notebook

Good to know

No paid tool is guaranteed – check access beforehand and keep a backup. Late submissions only if official policy permits.

Build & Prompting Tips

A good prompt = role + problem & user + one task + constraints + how to test

“Act as a product designer and frontend developer. Build a study planner for college students in HTML, CSS and JavaScript, mobile-friendly, with local storage. Give run steps and a test checklist.”

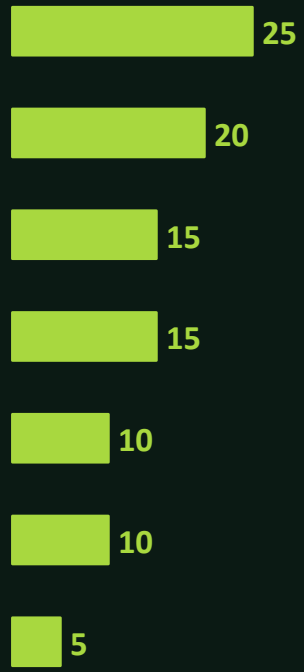

Working habits

- Plan first, then build one feature at a time
- Run the app after every change
- Paste the exact error message when debugging
- Keep a working version before big changes
- Test everything AI generates

Suggested tools

Google Antigravity (if available), Cursor, Windsurf, Replit, Firebase Studio, GitHub Copilot, HTML/CSS/JS, React, Firebase, Supabase, Figma, Git/GitHub

Evaluation Scorecard – 100 Points

Functionality & execution	25	Core feature works; demo matches claims
Effective use of AI & prompting	20	Clear iteration; you understand the output
Problem understanding & relevance	15	Clear problem, defined users, fits the track
Innovation & creativity	15	Distinctive approach, not a generic template
User experience & accessibility	10	Clear, readable, easy to use
Testing & responsible design	10	Basic tests, honest limits, data safety
Pitch & demonstration	5	Concise and clear; handles questions

Total: 25+20+15+15+10+10+5 = 100. Weights are indicative; the final rubric will be explained before judging.

Submit, Demo & Go Build!

What to submit

- Project name and track
- Problem and users; solution summary
- Working demo link or project files
- README with run steps and limitations
- Screenshots / demo video if asked
- AI tools used + originality declaration

Demo & judging

3–4 minutes + up to 2 minutes of questions. Exact submission fields will be announced at the briefing.
